

EXPERIMENT 26:

Demonstrate Infrastructure as a Service (IaaS) by creating a Virtual Machine using a Public Cloud Service Provider (Azure), configure with required memory and CPU.

Aim

To demonstrate Infrastructure as a Service (IaaS) using Microsoft Azure by creating and configuring a Virtual Machine with the required CPU and memory resources through a public cloud service provider.

Procedure

1. Open the Microsoft Azure Portal and sign in using a valid Azure account.
2. Navigate to Virtual Machines and select Create → Azure virtual machine.
3. Select the required Subscription and create or select a Resource Group for the virtual machine.
4. Enter a suitable Virtual Machine name and select the required Region and Operating System image.
5. In the Size section, select a virtual machine configuration that provides the required number of vCPUs and RAM.
6. Configure the required administrator account, authentication method, storage, and networking settings.
7. Review the complete configuration and select Create to deploy the virtual machine.
8. After deployment, open the VM Overview page and verify its running status, CPU configuration, memory, operating system, and other allocated resources.

Virtual machine name	laaS-Test-VM1
Region	Central India
Availability options	Availability zone
Availability zone	1
Zone options	Self-selected zone
Security type	Trusted launch virtual machines
Enable secure boot	Yes
Enable vTPM	Yes
Integrity monitoring	No
Image	Ubuntu Server 24.04 LTS
Size	Standard B2ats_v2
VM architecture	x64
Authentication type	Password
Username	azureuser
Public inbound ports	HTTPS (443)
Azure Spot	No

Deployment

Your deployment is complete

Deployment name: CreateVirtualMachine-laaS-Test-VM1

Subscription: Azure for Students

Resource group: laaS-Practical-02

Start time: 1/8/2025 9:37:03 am

Correlation ID: c8613d85-2435-444f-a673-dc2d1d07e111

Deployment details

Next steps

Get up and shutdown Recommended

Monitor VM health, performance, and network dependencies Recommended

Run a script inside the virtual machine Recommended

Go to resource

Create another VM

Scale out your VM

Give feedback

Tell us about your experience with deployment

Deployment succeeded

Deployment 'CreateVirtualMachine-laaS-Test-VM1' to resource group 'laaS-Practical-02' was successful.

Result

The Virtual Machine was successfully created on Microsoft Azure as an IaaS resource. The required CPU and memory configuration was allocated to the VM, and the deployed virtual infrastructure was successfully verified through the Azure Portal.
